

# some tips for stranded knitting, trapping & weaving in CC yarn ends

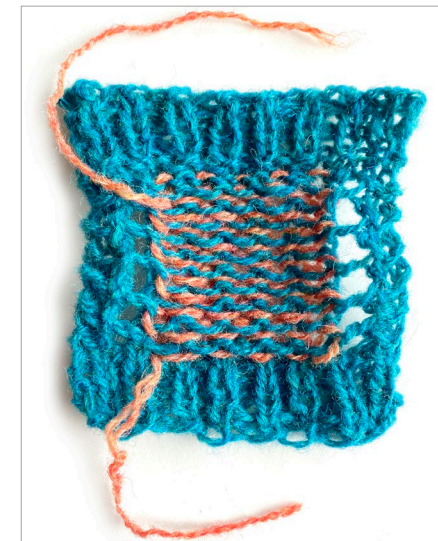

This is the finished swatch in Jamieson's Spindrift yarn, MC turquoise, CC orange.

This image shows the WS, with the first row of stranding completed; note that the MC yarn is held above the CC yarn and the MC floats are above the CC floats.

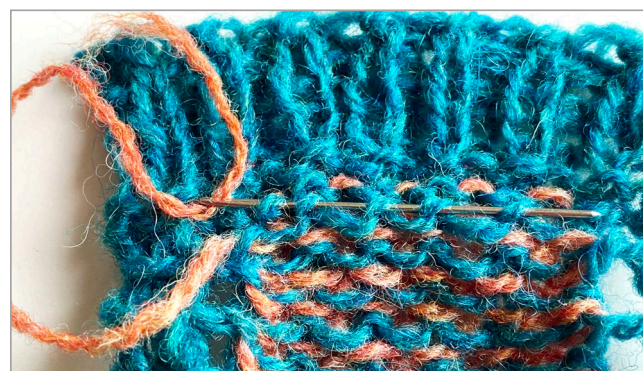

To trap the CC yarn where indicated on the chart, lift it over and around the MC, and return it to its position below the MC.

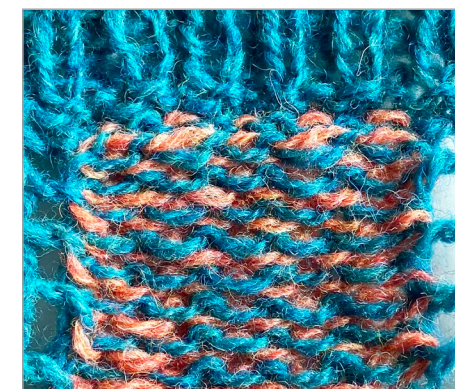

The back of the swatch before weaving in CC ends. The CC has been held below the MC on every row, creating a uniform arrangement of floats.

To weave in a CC yarn end, thread the yarn onto a darning needle, and pull the yarn through an adjacent loop of MC yarn.

Then pull the needle & CC yarn through a series of MC loops, all from the same row, so that the woven in end is parallel to the floats and blends in with the CC floats. With a more slippery yarn or a narrower motif, you might need to repeat this step in the opposite direction along another row of MC loops. At the point of a triangle or lozenge, work back and forth a couple of times.

Finally, trim the excess yarn.
